

Cell Phone, **WIRELESS**, (Radio frequency (RF) Radiation

EFFECTS ON THE HUMAN BODY

Cell phone users with 1,640 hours or more of use are nearly two and three-quarters more likely than non-users to develop an **acoustic neuroma**, a **benign tumor that may cause hearing loss, dizziness, loss of balance or death.** (7)

Increased risk of brain tumors especially glioma a malignant brain cancer with a very poor survival rate. Cell phone users with 1,640 hours or more of use have 2 to 2.5 times the risk as nonusers. (4,7)

Even short term cell phone use causes **unhealthy changes in the blood.** Red Blood Cells may stick together in "rouleaux" formation or the edges may degrade and become misshapen like a "bottlecap". Except ionizing radiation no other environmental factor has been as firmly established to increase the risk of childhood **leukemia.** (1, 6)

RF causes **permeability of the blood/brain barrier** allowing toxins to enter the brain. Many consider RF a plausible biological mechanism for **autism, Alzheimer's** and other **neurological disorders.** (1,3)

RFR accelerated development of both **skin (melanoma)** and **breast tumors** as well as many other cancers. It also **raises stress proteins** and **reduces immune function.** (3, 5, 8)

RF causes **ElectroHypersensitivity (EHS)** in some people. Persons may have symptoms such as: **Numbness or pain** in affected areas, **nosebleeds** concentration problems, **memory lapses, aches or pressure in head,** throat, and chest, unsteady balance, dizziness, **digestive disturbances** **altered heart rate,** ringing in the ears, excessive fatigue, **sleep disturbances,** eye irritation, **red skin blotches, eczema** (2)

RFR even at very low intensities causes **DNA damage** and impairment in human cells. Worse yet, it impairs DNA repair mechanisms. (3,5)

RF decreased sperm count and motility while increasing **sperm cell deformation and death.** Studies also link prenatal exposure to **negative effects** on the behavior and development (esp. brain) of **offspring.** (3,5,8)

What can you do?

- **Avoid** wireless signals and cordless phones
- **Connect** computers to wired internet using an Ethernet cable.
- Put wireless devices on **airplane mode** or turn them off when not in use.
 - **Educate** others
